***Allowable Subject Matter***

1. Claims 1-19 are allowed.

***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

The prior art taken singly or in combination does not teach or suggest, a signal processing circuit, among other things, comprising:

each of the plurality of output portions of the output-side line memory has a plurality of memory units and is configured as a shift register;

each of the shift registers has an output memory unit and data stored in the shift register is shifted and serially output from the output memory unit; and

the output memory units define the prescribed positions different from each other.

The closest prior art, Koyama et al. (U.S. Patent No. 6,597,349) teach a driving circuit for a semiconductor display device, comprising a driving circuit dividing a horizontal line of image into portions and sequentially supplying digital video data into a latch circuit (LAT1) (input-side line memory), capable of transferring data in parallel to an output-side line memory (LAT2), and a selector to sequentially outputting data to a display in analog form.

However, the output-side line memory portion as taught by Koyama et al. is not configured as a shift register as claimed.

***Conclusion***

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
